Product Description

This equipment is designed for adding working oil to an automobile shock absorber assembly. The equipment is electronically controlled, and the system uses a microcomputer and a touchscreen to control and set, which can set its refueling parameters separately according to the different viscosity of the oil to achieve accurate refueling volume. The liquid level control switch is used to control the amount of oil stored in the tank. When the amount of oil stored is lower than the lower limit, the equipment replenishes the external oil into the tank by itself to ensure the normal progress of the process.

S/N	Item	Parameter	Remarks
1	Single refueling volume	0~999ml	
2	Total height of workpiece	≤600mm	
3	Precision	±5ml
