## Product Description

This equipment is specialized equipment designed to add working oil to the train shock absorber assembly and tighten the sealing end nut. This equipment is mainly of refueling systems, workpiece clamping systems, nut tightening systems, and electronic control systems. The electronic control system for this equipment adopts a combination of a microcomputer and touch screen to control and set. The refueling system can set its refueling parameters separately according to the different viscosity of the oil to achieve accurate refueling volume. The tightening system adopts servo motor and torque sensor to tighten the predetermined torque
